

Case Study for Funded Solar and LED Installation At Gateway Academy

The Green Consultancy Inc. Limited (GCI) have been working closely with the Gateway Academy over the last 7 years helping them reduce their energy consumption and expenditure.

Due to the financial constraints on schools, there is often little money to help reduce consumption. This is where we came up with an innovative plan to help the school reduce both their energy consumption and expenditure without any cost to the schools bottom line.

We have installed a large solar array on the roof of the school free of charge. This will reduce the schools energy expenditure from the grid.

We have also installed £100,000 of much need LED lighting across the school in the areas which are used the most and on their new state of the art 4G sports pitch.

All for no cost to the school.

The school have now reduced their electricity expenditure from the grid as a large proportion is generated from the solar panels installed on their roof.

The cost of this electricity is approximately 20% less than they are paying through their current provider. This installation has been done with the approval of the local council and within Academy rules.
